```

the number of results predicted by chance to have a

Pred. No.

ß,

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Includes some cytokine receptors. The EGF domain misses the N-terminus regions of the Ca2+ binding EGF domains. The family is hard to model due to many similar but different sub-types of EGF domains. Pfam certainly misses a number of EGF domains"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        SVPDPELIKTVTINASSSRSGLDDINPTVLLKERSTEL"

(first entry) 93US-00084033 94WO-CA000501. /*tag= Location/Qualifiers 98. .1912 osteosarcoma; ss

Full-length cDNA derived from human osteosarcoma cells (given in AAQ89376) encoded human COX-2 (AAR72228). High-level expression of COX-2 in COS7 cells was achieved using a vaccinia or baculovirus vector and a construct in which COX-2 cDNA was attached at its 5' end to a 3' flanking sequence of human COX-1 cDNA (AAQ89377). (Updated on 25-MAR-2003 to

                       The human cyclooxygenase-2 cDNA is isolated from osteosarcoma cells, and is expressed from a mammalian or eukaryotic vector. The COX-2 protein is used in assays to identify inhibitors which have antiinflammatory, analgesic and anticancer activity. (Updated on 25-MAR-2003)
                  is expressed from a mammali
used in assays to identify
antipyretic, analgesic and
to correct PN field.)

Disclosure; Page 890-891; 1343pp; English.

The present invention describes a new composition comprising an antisense coligonucleotide (ON) with low adenosine (up to 15%), which targets coligonucleot acids involved in bronchoconstriction, allergies, and/or confilammation. The ON can have antiinflammatory, antiallergic, andiasthmatic, cytostatic and analgesic activities. The compositions are useful for the treatment of diseases associated with inflammation, compositions are composited airways, including lung disease and diseases whose secondary effects afflict the lungs of a subject. They can be used for treating e.g. ischaemic conditions, pulmonary vasoconstriction, allergies, asthma, impeded respiration, respiratory distress syndrome, pain, cystic composed respiration, respiratory vasoconstriction, pain, cystic carcinomas, and cancers which may metastasise to the lungs, including pulmonary disease (COPD), and cancers such as leukaemias, lymphomas, carcinomas, and cancers which may metastasise to the lungs, including breast and prostate cancer. The reduction of the adenosine content of the constant of deoxyadenosine which activates adenosine receptors causing bronchoconstriction and inflammation. AAA2313 to AAA35312 represent the nucleotide sequences given in the sequence listing from the present contention, which correspond to SEQ ID NO:1 to 185, but the sequences differ from the previously named sequences. SEQ ID NO:11 to 1680 (AAA32323 to AAA33992) are specifically claimed ONs from the present invention. N.B.

Low adenosine (A) content antisense oligonucleotides which do not trigger adenosine receptors during metabolism, useful e.g. for treating cancers and respiratory obstructions. respiratory obstructions.

Disclosure; Page 965-966; 1592pp; English

The present invention describes low adenosine (A) content antisense oligonucleotides and compositions (I) comprising them. In the antisense oligonucleotides the A is replaced by a 'Universal' or alternative base. (I) can have respiratory, bronchodilator, antiinflammatory, analgesic, immunosuppressive, antiasthmatic, hypotensive and cytostatic activities. The antisense oligonucleotides and (I) can be used to down-regulate the expression and or activity of target polypeptides associated with lung/respiratory disorders and malignancies, such as stimulating and activating peptide factors and transmitters, transcription factors, base.

```
cc immunoglobulins and antibodies, antibody receptors, cytokines and cchemokines, endogenously produced specific and non-specific enzymes, which is the proteins and specific and peripheral nervous and their receptors, cytokine and cchemokine receptors, adenosine receptors, bradykinin receptors, cytokine and cchemokine receptors, adenosine receptors, bradykinin receptors, central nervous and non-nervous system (CNS) and peripheral nervous and non-nervous system ccreeptors, binding proteins and malignancy associated proteins. The antisense oligonucleotides may be used in this way to treat disorders including respiratory obstruction (especially pulmonary obstruction and/or bronchoconstriction) and/or lung inflammation, allergy(ies) and/or surfactant hypoproduction which are associated with a disease or cc condition selected from pulmonary vasconstriction, inflammation, clairing sathma, impeded respiration, respiratory distress syndrome (RDS), pain, cystic fibrosis (CF) allergic rhinitis (AR), pulmonary cancer. AAP18434 to AAF21543 represent human polymucleotide fragments and antisense oligonucleotides used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                    8
